DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on April 21, 2011 has been entered.

Allowable Subject Matter

Claims 4-6, 10-12, 16, and 32-53 are allowed.

The closest prior art references are Harada et al (WO 2001/051173 A, English Equivalent US 2002/0197193 A1), Yamamura et al (JP 2000-102709 A), and Kato et al (JP 10-306203 A).

The following is an examiner's statement of reasons for allowance:

Regarding claim 4, Harada et al discloses **a honeycomb filter** (see Abstract) **for purifying exhaust gases, comprising: a plurality of columnar porous ceramic members (11) having a partition wall (14) and plurality of through holes (15), said through holes extending in parallel with one another in a length direction of said columnar porous ceramic members, said partition wall separating said through holes and configured to filter particulates in an exhaust gas, said through holes**

of each said columnar porous ceramic members including ones sealed at an inlet side of said columnar porous ceramic members and ones sealed at an outlet side of said columnar porous ceramic member such that the exhaust gas enters from the inlet side, passes through the partition wall and flows out from the outlet side; and an adhesive layer combining said columnar porous ceramic members with one another and formed by drying an adhesive paste including a pore forming material which forms a plurality of pores adjusting a thermal capacity per unit volume of said adhesive layer becomes lower than a thermal capacity per unit volume of the porous ceramic members (see Abstract; paragraphs 0024-0030, 0038, and 0041-0043; and figures 1a-d), since ceramic fiber, ceramic powder, cement, or the like produces pores.

Kato et al discloses a resin molded product including pore forming material and wherein the pore forming material comprises at least one of a balloon and a resin material (see Abstract).

The prior art references do not disclose or suggest an adhesive layer formed by drying an adhesive paste, the adhesive paste including the pore forming material which comprises at least one of a balloon and a thermally decomposed resin material.

Claims 5, 6, 32-34, and 47-53 depend on claim 4.

Regarding claim 10, Harada et al discloses **a honeycomb filter** (see Abstract) **for purifying exhaust gases, comprising: a ceramic block comprising at least one columnar porous ceramic member having a partition wall and plurality of through holes, said through holes extending in parallel with one another in a length**

direction of said columnar porous ceramic members, said partition wall separating said through holes and configured to filter particulates in an exhaust gas, said through holes of each said columnar porous ceramic members including ones sealed at an inlet side of said columnar porous ceramic members and ones sealed at an outlet side of said columnar porous ceramic member such that the exhaust gas enters from the inlet side, passes through the partition wall and flows out from the outlet side (see Abstract; paragraphs 0024-0030, 0038, and 0041-0043; and figures 1a-d).

Yamamura et al discloses coating the peripheral part of the ceramic block by the sealant which contains an inorganic fiber, an inorganic binder, an organic binder, and an inorganic particle at least (see paragraphs 15 and 22-25) resulting in **a coating material layer formed on a circumferential face of said ceramic block and formed by drying a coating material paste including a pore forming which forms a plurality of pores adjusting a thermal capacity per volume of said coating material layer is lower than a thermal capacity per unit volume of the porous members, since inorganic fiber and silicon carbide produces pores.**

Kato et al discloses a resin molded product including pore forming material and wherein the pore forming material comprises at least one of a balloon and a resin material (see Abstract).

The prior art references do not disclose or suggest a coating material layer formed by drying a coating material paste, the coating material paste including the pore

forming material which comprises at least one of a balloon and a thermally decomposed resin material.

Claims 11 and 35-37 depend on claim 10.

Regarding claim 16, Harada et al discloses **a honeycomb filter (see Abstract) for purifying exhaust gases, comprising: a plurality of columnar porous ceramic members having a partition wall and plurality of through holes, said through holes extending in parallel with one another in a length direction of said columnar porous ceramic members, said partition wall separating said through holes and configured to filter particulates in an exhaust gas, said through holes of each said columnar porous ceramic members including ones sealed at an inlet side of said columnar porous ceramic members and ones sealed at an outlet side of said columnar porous ceramic member such that the exhaust gas enters from the inlet side, passes through the partition wall and flows out from the outlet side; and an adhesive layer combining said columnar porous ceramic members with one another and formed by drying an adhesive paste including a pore forming material which forms a plurality of pores adjusting a thermal capacity per unit volume of said adhesive layer becomes lower than a thermal capacity per unit volume of the porous ceramic members** (see Abstract; paragraphs 0024-0030, 0038, and 0041-0043; and figures 1a-d).

Yamamura et al discloses coating the peripheral part of the ceramic block by the sealant which contains an inorganic fiber, an inorganic binder, an organic binder, and an inorganic particle at least (see paragraphs 15 and 22-25) resulting in **a coating**

material layer formed on a circumferential face of said ceramic block and formed by drying a coating material paste including a pore forming which forms a plurality of pores adjusting a thermal capacity per volume of said coating material layer is lower than a thermal capacity per unit volume of the porous members, since inorganic fiber and silicon carbide produces pores.

Kato et al discloses a resin molded product including pore forming material and wherein the pore forming material comprises at least one of a balloon and a resin material (see Abstract).

The prior art references do not disclose or suggest an adhesive layer formed by drying an adhesive paste, the adhesive paste including the pore forming material which comprises at least one of a balloon and a thermally decomposed resin material; and a coating material layer formed by drying a coating material paste, the coating material paste including the pore forming material which comprises at least one of a balloon and a thermally decomposed resin material.

Claims 38-46 depend on claim 16.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
